

Laser Printer System Frequency Synthesizer

Features

- Maximized EMI suppression using Cypress's Spread Spectrum technology
- Reduces measured EMI by as much as 10 dB
- Four skew-controlled copies of CPU output
- Four skew-controlled copies of SDRAM output
- One copy of 14.31818-MHz Reference output
- One copy of 48-MHz USB clock (not spread)
- Selectable SSFTG modulation width
- Available in 28-pin SSOP (209 mil)

Key Specifications

Supply Voltage:
 VDDCORE:3.3 V ± 10%
 VDDC: 3.3 V ± 10% or 2.5 V ± 5%
 VDDS: 3.3 V ± 10% or 2.5 V ± 5%
 VDDU: 3.3 V ± 10% or 2.5 V ± 5%
 CPU Clock Cycle to Cycle Jitter:250 ps
 USBCLK Long term Jitter: ± 500 ps
 CPU0:3 Clock Skew:250 ps
 CPU, SDRAM Output on Resistance:15 Ω
 Logic inputs have 250 KΩ pull-up resistors

Notes

2. Signals marked with [*] have internal pull-up resistors.
3. Signal marked with [^] has internal pull-down resistors.

Pin Definitions

| Pin Name | Pin No. | Pin Type | Pin Description |
|----------|----------------|----------|--|
| CPU0:3 | 24, 23, 21, 20 | O | CPU Clock Outputs: These four outputs run at a frequency set by FS0:1. The width of the Spread Spectrum Modulation is enabled by pin SSON#, and selected by pins SS%0:1. |
| SDRAM0:3 | 10, 9, 7, 6 | O | SDRAM Outputs: These four SDRAM clock outputs run synchronously to the CPU clock. Modulation and frequency follow the CPU outputs. |
| FS0:1 | 15, 16 | I | Frequency Selection Inputs: Selects CPU clock frequency as shown in Pin Selectable Frequency ^[1] on page 1 . |
| SS%0:1 | 14, 18 | I | Modulation Width Selection Inputs: These inputs select the width of the Spread Spectrum feature when it is enabled by SSON#. |
| USBCLK | 26 | O | USB Output: Timing signal running at 48.0080 MHz when a 14.31818-MHz frequency is provided as the reference. (167 ppm accuracy to 48 MHz, the output is equal to the reference times 57/17.) |
| SSON# | 17 | I | CPU Spread Spectrum Enable Input: When this pin is pulled LOW, outputs CPU0:3 and SDRAM0:3 will have the Spread Spectrum Feature enabled. |
| USBCLKEN | 28 | I | USB Disable Input: When this pin is pulled LOW, output USBCLK will be disabled to a LOW state. |
| REF | 2 | O | Reference Output: This output will be equal in frequency to the reference signal provided at X1/X2. |
| SDEN | 13 | I | SDRAM Bank Disable Input: When this pin is pulled LOW, outputs SDRAM0:3 will be disabled to a LOW state. |
| X1 | 4 | I | Crystal Connection or External Reference Frequency Input: Connect to either a 14.318-MHz crystal or other reference signal. |
| X2 | 5 | I | Crystal Connection: An input connection for an external 14.318-MHz crystal. If using an external reference, this pin must be left unconnected. |
| VDDCORE | 1, 12 | P | Power Connection: Core Power supply. Connect to 3.3 V supply. |
| VDDU | 25 | P | Power Connection: Power supply for the USB output. Connect to 3.3 V or 2.5 V supply. |
| VDDC | 22 | P | Power Connection: Power supply for the CPU outputs. Connect to 3.3 V or 2.5 V supply. |
| VDDS | 8 | P | Power Connection: Power supply for the SDRAM outputs. Connect to 3.3 V or 2.5 V supply. |
| GND | 3, 11, 19, 27 | G | Ground Connections: Connect all ground pins to the common system ground plane. |

Spread Spectrum Generator

The device generates a clock that is frequency modulated in order to increase the bandwidth that it occupies. By increasing the bandwidth of the fundamental and its harmonics, the amplitudes of the radiated electromagnetic emissions are reduced. This effect is depicted in Figure 1.

As shown in Figure 1, a harmonic of a modulated clock has a much lower amplitude than that of an unmodulated signal. The reduction in amplitude is dependent on the harmonic number and the frequency deviation or spread. The equation for the reduction is

$$dB = 6.5 + 9 \cdot \log_{10}(P) + 9 \cdot \log_{10}(F)$$

Where P is the percentage of deviation and F is the frequency in MHz where the reduction is measured.

The output clock is modulated with a waveform depicted in Figure 2. This waveform, as discussed in “Spread Spectrum Clock Generation for the Reduction of Radiated Emissions” by Bush, Fessler, and Hardin, produces the maximum reduction in the amplitude of radiated electromagnetic emissions. The deviation selected for this chip is $\pm 0.5\%$ of the center frequency. Figure 2 details the Cypress spreading pattern. Cypress does offer options with more spread and greater EMI reduction. Contact your local Sales representative for details on these devices.

Spread Spectrum clocking is activated or deactivated by selecting the appropriate values for bits 1–0 in data byte 0 of the SMBus data stream.

Absolute Maximum Ratings^[4]

Stresses greater than those listed in this table may cause permanent damage to the device. These represent a stress rating only. Operation of the device at these or any other conditions above those specified in the operating sections of this specification is not implied. Maximum conditions for extended periods may affect reliability.

| Parameter | Description | Rating | Unit |
|-----------------------------------|--|--------------|------|
| V _{DD} , V _{IN} | Voltage on any pin with respect to GND | -0.5 to +7.0 | V |
| T _{STG} | Storage Temperature | -65 to +150 | °C |
| T _A | Operating Temperature | -55 to +125 | °C |
| T _B | Ambient Temperature under Bias | 0 to +70 | °C |
| ESD _{PROT} | Input ESD Protection | 2 (min.) | kV |

DC Electrical Characteristics

T_A = 0°C to +70°C, V_{DDQ3} = 3.3 V ± 10%

| Parameter | Description | Test Condition | Min | Typ | Max | Unit |
|-----------------------------------|--|--|---------|-----|---------------------|------|
| Supply Current | | | | | | |
| I _{DDQ3} | Supply Current (3.3 V) | CPUCLK = 100 MHz Outputs Loaded ^[4] | - | - | 400 | mA |
| I _{DDQ2} | Supply Current (2.5 V) | CPUCLK = 100 MHz Outputs Loaded ^[4] | - | - | 400 | mA |
| Logic Inputs^[5] | | | | | | |
| V _{IL} | Input Low Voltage | - | GND - 3 | - | 0.8 | V |
| V _{IH} | Input High Voltage | - | 2.0 | - | V _{DD} +.3 | V |
| I _{IL} | Input Low Current ^[6] | - | - | - | -25 | μA |
| I _{IH} | Input High Current ^[6] | - | - | - | 10 | μA |
| Crystal Oscillator | | | | | | |
| V _{TH} | X1 Input Threshold Voltage ^[7] | - | - | 1.5 | - | V |
| C _{LOAD} | Load Capacitance, Imposed on External Crystal ^[8] | - | - | 14 | - | pF |
| C _{IN,X1} | X1 Input Capacitance ^[9] | Pin X2 unconnected | - | 28 | - | pF |
| Pin Capacitance/Inductance | | | | | | |
| C _{IN} | Input Pin Capacitance | Except X1 and X2 | - | - | 5 | pF |
| C _{OUT} | Output Pin Capacitance | - | - | - | 6 | pF |
| L _{IN} | Input Pin Inductance | - | - | - | 7 | nH |

Notes

- Multiple Supplies: The voltage on any input or I/O pin cannot exceed the power pin during power-up. Power supply sequencing is NOT required.
- CY24242 logic inputs have internal pull-up resistors.
- X1 input threshold voltage (typical) is V_{DDQ}/2.
- All clock output loaded with maximum lump capacitance test load specified in AC Electrical Characteristics section.
- The CY24242 contains an internal crystal load capacitor between pin X1 and ground and another between pin X2 and ground. Total load placed on crystal is 14 pF; this includes typical stray capacitance of short PCB traces to crystal.
- X1 input capacitance is applicable when driving X1 with an external clock source (X2 is left unconnected).

AC Electrical Characteristics

$T_A = 0\text{ }^{\circ}\text{C}$ to $+70\text{ }^{\circ}\text{C}$, $V_{DD} = V_{DDQ3} = 3.3\text{ V} \pm 10\%$, $f_{XTL} = 14.31818\text{ MHz}$

AC clock parameters are tested and guaranteed over stated operating conditions using the stated lump capacitive load at the clock output.

CPU Clock Outputs, CPU0:3

(Lump Capacitance Test Load = 20 pF, $V_{DDC} = 3.3\text{ V}$)

| Parameter | Description | Test Condition/Comments | CPU = 66 MHz | | | CPU = 100 MHz | | | Unit |
|-----------|--|---|--------------|-----|------|---------------|-----|------|----------|
| | | | Min | Typ | Max | Min | Typ | Max | |
| t_P | Period | Measured on rising edge at 1.5 V | 15 | – | 15.5 | 10 | – | 10.5 | ns |
| t_H | High Time | Duration of clock cycle above 2.4 V | 5.2 | – | – | 3.0 | – | – | ns |
| t_L | Low Time | Duration of clock cycle below 0.4 V | 5 | – | – | 2.8 | – | – | ns |
