- High Output Drivers:  $\pm 24mA$
- Suitable for heavy loads

### DESCRIPTION:

This 16-bit buffer/driver is built using advanced dual metal CMOS technology. The ALVC16244A is designed specifically to improve the performance and density of 3-state memory address drivers, clock drivers, and bus-oriented receivers and transmitters. The device can be used as four 4-bit buffers, two 8-bit buffers, or one 16-bit buffer. It provides true outputs and symmetrical active-low output-enable ( $\overline{OE}$ ) inputs.

The ALVC16244A has been designed with a  $\pm 24mA$  output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

### APPLICATIONS:

- 3.3V high speed systems
- 3.3V and lower voltage computing systems
