### Description

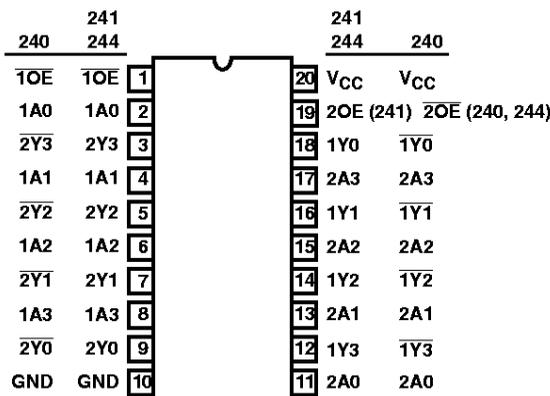

The Harris CD74HC240 and CD74HCT240 are inverting three-state buffers having two active-low output enables. The Harris CD74HC241, CD74HCT241, CD74HC244 and CD74HCT244 are non-inverting three-state buffers that differ only in that the 241 has one active-high and one active-low output enable, and the 244 has two active-low output enables. All three types have identical pinouts.
