**COMPONENT**

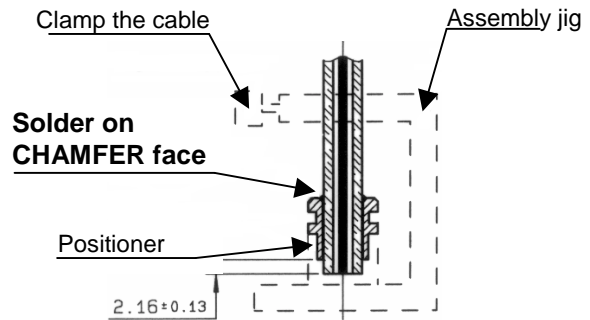

**STRIPPING DIMENSIONS**

We recommend a thermal preconditioning cable.

**1**

Place the cable into the assembly jig (R282.740.000). Place the connector body and positioner (R282.744.100) onto the cable and clamp cable. Put 3 rings of solder around the cable. Solder the body onto the cable.

**2**

Immobilize the cable using the thumb crew on the cable holder (R282.059.100). Get the positioner into the connector groove, using knurled push-button. Push button until it stops. Tighten cable. Present the stripping tool (R282.053.100) opposite the cable holder. Push and turn both elements with respect to each other. When the tool stop cutting : pull off without turning it.

**3**

Present the trimmer (R282.066.100) opposite the cable holder, push and turn both elements with respect to each other until fully home.

**4**

Place retaining ring onto its insert tool (R282.760.000). Push sub-assembly into the tool until the retaining ring snaps into place. Place the interface seal O ring onto body.

**5**

Compress retaining ring using retaining ring pliers. Push coupling nut onto sub-assembly and over retaining ring.
