

LC75879PT

1/4, 1/3-Duty General-Purpose LCD Driver

ON Semiconductor®

www.onsemi.com

Overview

The LC75879PT is the 1/4 duty and 1/3 duty general-purpose microprocessor-controlled LCD driver that can be used in applications such as frequency display in products with electronic tuning. In addition to being able to drive up to 272 segments directly, the LC75879PT can also control up to 8 general-purpose output ports. Because it has the PWM output of a maximum of 3 ch, the brightness control of the LED backlight of RGB can be done. Incorporation of an oscillation circuit helps to reduce the number of external resistors and capacitors required.

Features

- Support for 1/4-duty 1/3-bias or 1/3-duty 1/3-bias drive techniques under serial data control.
 - When 1/4-duty: Capable of driving up to 272 segments
 - When 1/3-duty: Capable of driving up to 207 segments
- Serial data input supports CCB* format communication with the system controller (Support 3.3 V and 5 V operation).
- Serial data control of the power-saving mode based backup function and the all segments forced off function.
- Serial data control of switching between the segment output port and general-purpose output port function.
(Support for up to 8 general-purpose output ports)
- Support for the PWM output function of a maximum of 3 ch (It can output from the general-purpose output port).
- Support for clock output function of 1 ch (It can output from the general-purpose output port).
- Serial data control of the frame frequency of the common and segment output waveforms.
- Serial data control of switching between the internal oscillator operating mode and external clock operating mode.
- High generality, since display data is displayed directly without the intervention of a decoder circuit.
- Built-in display contrast adjustment circuit.
- The INH pin allows the display to be forced to the off state.
- Incorporation of an oscillator circuit (Incorporation of resistor and capacitor for an oscillation).

TQFP80 12x12 / TQFP80J

* Computer Control Bus (CCB) is an ON Semiconductor's original bus format and the bus addresses are controlled by ON Semiconductor.

ORDERING INFORMATION

See detailed ordering and shipping information on page 35 of this data sheet.

LC75879PT

Specifications

Absolute Maximum Ratings at Ta = 25°C, VSS = 0 V

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	VDD max	VDD	-0.3 to +6.8	V
Input voltage	VIN1	CE, CL, DI, $\overline{\text{INH}}$	-0.3 to +6.8	V
	VIN2	OSCI, VDD1, VDD2	-0.3 to VDD+0.3	
Output voltage	VOU	S1 to S69, COM1 to COM4, P1 to P8	-0.3 to VDD+0.3	V
Output current	IOUT1	S1 to S68	300	μA
	IOUT2	COM1 to COM4, S69	3	mA
	IOUT3	P1 to P8	5	
Allowable power dissipation	Pd max	Ta = 85°C	200	mW
Operating temperature	Topr		-40 to +85	°C
Storage temperature	Tstg		-55 to +125	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Allowable Operating Ranges at Ta = -40 to +85°C, VSS = 0 V

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Supply voltage	VDD	VDD	4.5		6.3	V
Input voltage *1	VDD1	VDD1		2/3VDD0	VDD0	V
	VDD2	VDD2		1/3VDD0	VDD0	
Input high level voltage	VIH1	CE, CL, DI, $\overline{\text{INH}}$	0.4VDD		6.3	V
	VIH2	OSCI: External clock operating mode	0.4VDD		VDD	
Input low level voltage	VIL1	CE, CL, DI, $\overline{\text{INH}}$	0		0.2VDD	V
	VIL2	OSCI: External clock operating mode	0		0.2VDD	
External clock operating frequency	fCK	OSCI: External clock operating mode [Figure4]	10	300	600	kHz
External clock duty cycle	DCK	OSCI: External clock operating mode [Figure4]	30	50	70	%
Data setup time	tds	CL, DI [Figure2], [Figure3]	160			ns
Data hold time	tdh	CL, DI [Figure2], [Figure3]	160			ns
CE wait time	tcp	CE, CL [Figure2], [Figure3]	160			ns
CE setup time	tcs	CE, CL [Figure2], [Figure3]	160			ns
CE hold time	tch	CE, CL [Figure2], [Figure3]	160			ns
High level clock pulse width	tφH	CL [Figure2], [Figure3]	160			ns
Low level clock pulse width	tφL	CL [Figure2], [Figure3]	160			ns
Rise time	tr	CE, CL, DI [Figure2], [Figure3]		160		ns
Fall time	tf	CE, CL, DI [Figure2], [Figure3]		160		ns
$\overline{\text{INH}}$ switching time	tc	$\overline{\text{INH}}$, CE [Figure5], [Figure6] [Figure7], [Figure8]	10			μs

Note : *1. VDD0 = 0.70VDD to VDD

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

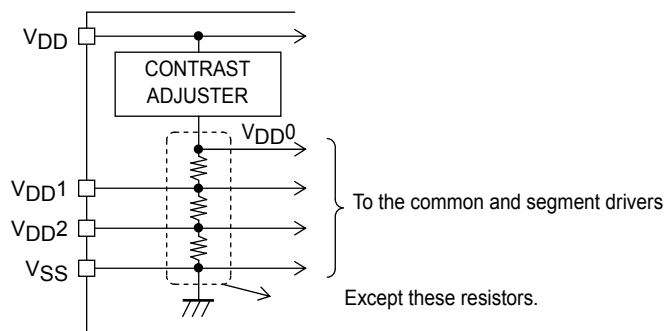

LC75879PT

Electrical Characteristics for the Allowable Operating Ranges

Parameter	Symbol	Pin	Conditions	Ratings			Unit
				min	typ	max	
Hysteresis	V_H	CE, CL, DI, \overline{INH}			0.03 V_{DD}		V
Input high level current	I_{IH1}	CE, CL, DI, \overline{INH}	$V_I = 6.3\text{ V}$			5.0	μA
	I_{IH2}	OSCI	$V_I = V_{DD}$: External clock operating mode			5.0	
Input low level current	I_{IL1}	CE, CL, DI, \overline{INH}	$V_I = 0\text{ V}$	-5.0			μA
	I_{IL2}	OSCI	$V_I = 0\text{ V}$: External clock operating mode	-5.0			
Output high level voltage *1	V_{OH1}	S1 to S69	$I_O = -20\ \mu\text{A}$	$V_{DD0} - 0.9$			V
	V_{OH2}	COM1 to COM4	$I_O = -100\ \mu\text{A}$	$V_{DD0} - 0.9$			
	V_{OH3}	P1 to P8	$I_O = -1\text{ mA}$	$V_{DD} - 0.9$			
Output low level voltage	V_{OL1}	S1 to S69	$I_O = 20\ \mu\text{A}$			0.9	V
	V_{OL2}	COM1 to COM4	$I_O = 100\ \mu\text{A}$			0.9	
	V_{OL3}	P1 to P8	$I_O = 1\text{ mA}$			0.9	
Output middle level voltage *1 *2	V_{MID1}	S1 to S69	1/3 bias $I_O = \pm 20\ \mu\text{A}$	$2/3V_{DD0} - 0.9$		$2/3V_{DD0} + 0.9$	V
	V_{MID2}	S1 to S69	1/3 bias $I_O = \pm 20\ \mu\text{A}$	$1/3V_{DD0} - 0.9$		$1/3V_{DD0} + 0.9$	
	V_{MID3}	COM1 to COM4	1/3 bias $I_O = \pm 100\ \mu\text{A}$	$2/3V_{DD0} - 0.9$		$2/3V_{DD0} + 0.9$	
	V_{MID4}	COM1 to COM4	1/3 bias $I_O = \pm 100\ \mu\text{A}$	$1/3V_{DD0} - 0.9$		$1/3V_{DD0} + 0.9$	
Oscillator frequency	fosc	Internal oscillator circuit	Internal oscillator operating mode	240	300	360	kHz
Current drain	I_{DD1}	V_{DD}	Power-saving mode			100	μA
	I_{DD2}	V_{DD}	$V_{DD} = 6.3\text{ V}$ Output open Internal oscillator operating mode		1000	2000	
	I_{DD3}	V_{DD}	$V_{DD} = 6.3\text{ V}$ Output open External clock operating mode $f_{CK} = 300\text{ kHz}$ $V_{IH2} = 0.5V_{DD}$ $V_{IL2} = 0.1V_{DD}$		1000	2000	

Note: *1. $V_{DD0} = 0.70V_{DD}$ to V_{DD}

Note: *2. Excluding the bias voltage generation divider resistors built in the V_{DD1} and V_{DD2} . (See Figure 1.)

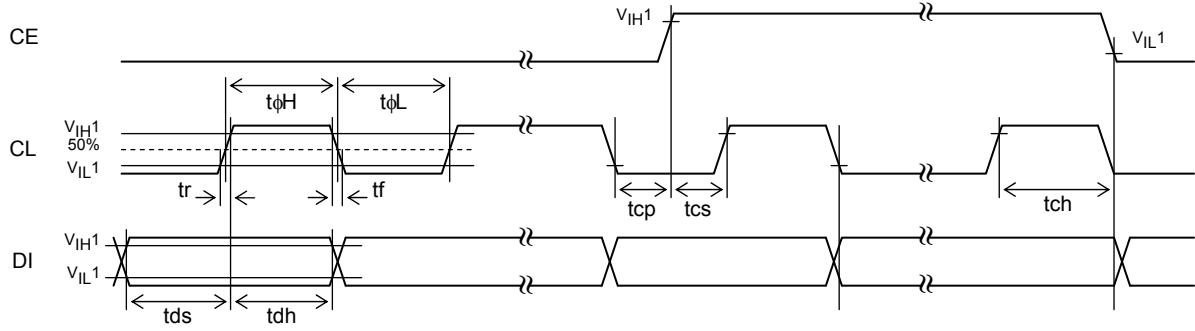

[Figure 1]

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- FC0 to FC2 Common/segment output waveform frame frequency setting control data
- CT0 to CT2 Display contrast setting control data

Serial Data Transfer Example

(1) 1/4 duty

- When 201 or more segments are used
All 352 bits of serial data must be sent.

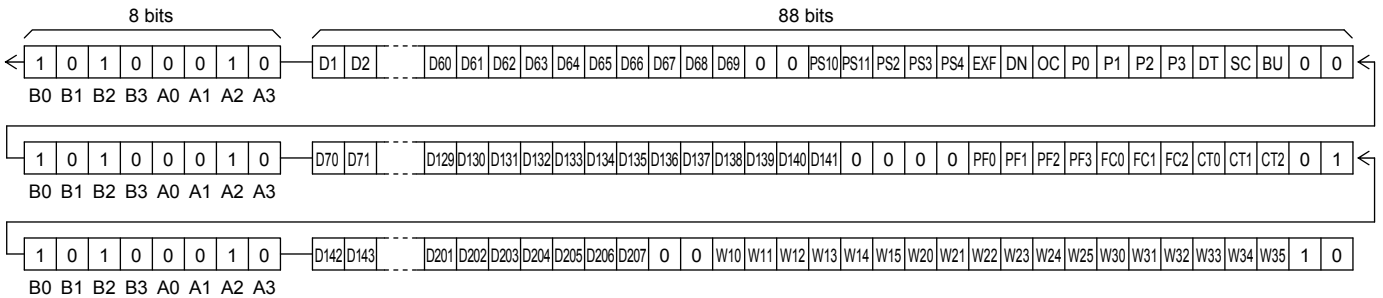

- When fewer than 201 segments are used
The 264 bits of serial data must be sent.
However, the serial data shown below (the D1 to D200 display data and the control data) must always be sent.

2. 1/3 duty

All 264 bits of serial data must be sent.

LC75879PT

3. 1/4 duty (Simple mode transfer)

- When 201 or more segments are used
All 320 bits of serial data must be sent.

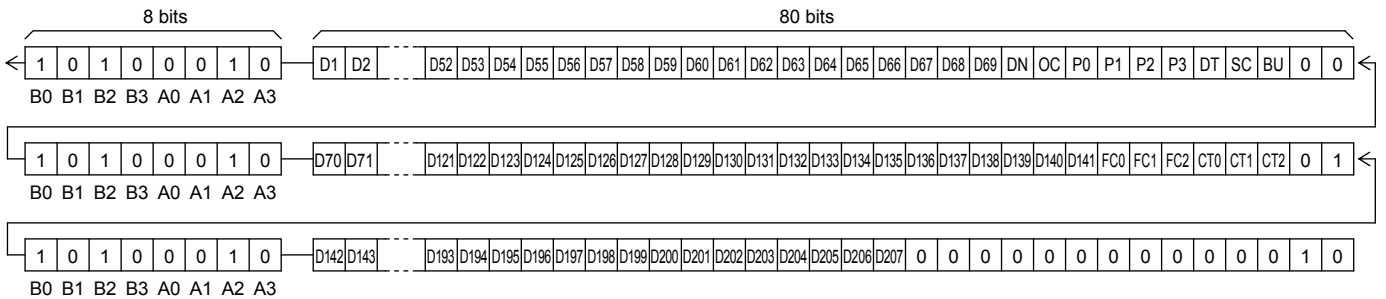

- When fewer than 201 segments are used
Either 160 or 240 bits of serial data must be sent, depending on the number of segments to be used.
However, the serial data shown below (the D1 to D136 display data and the control data) must always be sent.

4. 1/3 duty (Simple mode transfer)

- When 142 or more segments are used
All 240 bits of serial data must be sent.

- When fewer than 142 segments are used
The 160 bits of serial data must be sent.
However, the serial data shown below (the D1 to D141 display data and the control data) must always be sent.

Control Data Functions

(1) PS10 and PS11, PS2 to PS4 ... General-purpose output port (P1 to P4) function setting control data

These control data bits set the general-purpose output function (High or low level output), clock output function or PWM output function of the P1 output pin, and the general-purpose output function (High or low level output) or PWM output function of the P2 to P4 output pins.

However, be careful of being unable to set a PWM output function when the external clock operating frequency is set the $f_{CK2} = 38[\text{kHz}]$ typ (EXF = "1") in external clock operating mode (OC = "1").

In addition, be careful of setting of the general-purpose output function (High or low level output) in the case of the simple mode transfer forcibly.

PS10	PS11	General-purpose output port (P1) function
0	0	General-purpose output function (High or low level output)
1	0	Clock output function (Clock frequency : $f_{osc}/2, f_{CK}/2$)
0	1	Clock output function (Clock frequency : $f_{osc}/8, f_{CK}/8$)
1	1	PWM output function (Support for PWM data W10 to W15)

PS2	General-purpose output port (P2) function
0	General-purpose output function (High or low level output)
1	PWM output function (Support for PWM data W20 to W25)

PS3	General-purpose output port (P3) function
0	General-purpose output function (High or low level output)
1	PWM output function (Support for PWM data W30 to W35)

PS4	General-purpose output port (P4) function
0	General-purpose output function (High or low level output)
1	PWM output function (Support for PWM data W10 to W15)

(2) EXF ... External clock operating frequency setting control data

This control data bit sets the operating frequency of the external clock which input into the OSCI pin, when the external clock operating mode (OC = "1") is set. However, be careful of setting the $f_{CK1} = 300[\text{kHz}]$ typ when the external clock operating mode (OC = "1") is set in the case of the simple mode transfer forcibly. In addition, this data is effective only when external clock operating mode (OC = "1") is set.

EXF	External clock operating frequency $f_{CK}[\text{kHz}]$
0	$f_{CK1}=300[\text{kHz}]$ typ
1	$f_{CK2}=38[\text{kHz}]$ typ

(3) DN ... S68 pin and S69/OSCI pin state setting control data

This control data bit sets state of the S68 pin and the S69/OSCI pin.

DN	Number of display segments		Pin state	
	1/4 duty	1/3 duty	S68	S69/OSCI
0	Up to 264 segments	Up to 201 segment	"L"(V _{SS})	"L"(V _{SS})/OSCI
1	Up to 272 segments	Up to 207 segment	S68	S69/OSCI

Note: "L" (V_{SS}) : Low (V_{SS}) level output

S68 : Segment output

"L" (V_{SS})/OSCI : Low (V_{SS}) level output in internal oscillator operating mode (OC = 0)
External clock input in external clock operating mode (OC = 1)

S69/OSCI : Segment output in internal oscillator operating mode (OC = 0)
External clock input in external clock operating mode (OC = 1)

LC75879PT

(4) OC ... Internal oscillator operating mode/external clock operating mode switching control data

This control data bit selects either the internal oscillator operating mode or external clock operating mode.

OC	Fundamental clock operating mode	I/O pin (S69/OSCI) state
0	Internal oscillator operating mode	S69
1	External clock operating mode	OSCI

Note: S69 : Segment output
OSCI : External clock input

(5) P0 to P3 ... Segment output port/general-purpose output port switching control data

These control data bits switch the segment output port/general-purpose output port functions of the S1/P1 to S8/P8 output pins.

Control data				Output pin state							
P0	P1	P2	P3	S1/P1	S2/P2	S3/P3	S4/P4	S5/P5	S6/P6	S7/P7	S8/P8
0	0	0	0	S1	S2	S3	S4	S5	S6	S7	S8
0	0	0	1	P1	S2	S3	S4	S5	S6	S7	S8
0	0	1	0	P1	P2	S3	S4	S5	S6	S7	S8
0	0	1	1	P1	P2	P3	S4	S5	S6	S7	S8
0	1	0	0	P1	P2	P3	P4	S5	S6	S7	S8
0	1	0	1	P1	P2	P3	P4	P5	S6	S7	S8
0	1	1	0	P1	P2	P3	P4	P5	P6	S7	S8
0	1	1	1	P1	P2	P3	P4	P5	P6	P7	S8
1	0	0	0	P1	P2	P3	P4	P5	P6	P7	P8

Note1: Sn(n=1 to 8): Segment output ports

Pn(n=1 to 8): General-purpose output ports

Note2: When are setting (P0,P1,P2,P3)=(1,0,0,1), (1,0,1,0), (1,0,1,1) and (1,1,X,X), the all P1/S1 to P8/S8 output pins selects the segment output port. X: don't care

The table below lists the correspondence between the display data and the output pins when these pins are selected to be general-purpose output ports (general-purpose output function).

Output pin	Correspondence display data	
	1/4 duty	1/3 duty
S1/P1	D1	D1
S2/P2	D5	D4
S3/P3	D9	D7
S4/P4	D13	D10
S5/P5	D17	D13
S6/P6	D21	D16
S7/P7	D25	D19
S8/P8	D29	D22

For example, if the circuit is operated in 1/4 duty and the S4/P4 output pin is selected to be a general-purpose output port and is set general-purpose output function, the S4/P4 output pin will output a high level when the display data D13 is 1, and will output a low level when D13 is 0.

(6) DT ... 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive switching control data

This control data bit selects either 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive.

DT	Drive scheme	The COM4/S67 pin state
0	1/4-duty 1/3-bias drive	COM4
1	1/3-duty 1/3-bias drive	S67

Note: COM4 : Common output
S67 : Segment output

(7) SC ... Segment on/off control data

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

Note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

(8) BU ... Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

BU	Mode
0	Normal mode
1	Power saving mode In this mode, the internal oscillator circuit stops oscillation (the S69/OSCI pin is configured for segment output) if the IC is in the internal oscillator operating mode (OC=0) and the IC stops receiving external clock signals (the S69/OSCI pin is configured for external clock input) if the IC is in the external clock operating mode (OC=1). The common and segment output pins go to the V _{SS} level. However, the S1/P1 to S8/P8 output pins can be used as general-purpose output ports under the control of the data bits P0 to P3. (The general-purpose output port P1 to P4 can not be used as clock output or PWM output).

(9) PF0 to PF3 ... PWM output waveform frame frequency setting control data

These control data bits set the frame frequency of the PWM output waveforms. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the f_{CK2} = 38[kHz] typ (EXF = "1") in external clock operating mode (OC = "1") or when the serial data transfer is the simple mode transfer, these control data bits become invalid.

Control data				PWM output waveform frame frequency fp[Hz]	
PF0	PF1	PF2	PF3	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 0, f _{CK1} =300[kHz] typ)
0	0	0	0	fosc/1536	f _{CK1} /1536
1	0	0	0	fosc/1408	f _{CK1} /1408
0	1	0	0	fosc/1280	f _{CK1} /1280
1	1	0	0	fosc/1152	f _{CK1} /1152
0	0	1	0	fosc/1024	f _{CK1} /1024
1	0	1	0	fosc/896	f _{CK1} /896
0	1	1	0	fosc/768	f _{CK1} /768
1	1	1	0	fosc/640	f _{CK1} /640
0	0	0	1	fosc/512	f _{CK1} /512
1	0	0	1	fosc/384	f _{CK1} /384
0	1	0	1	fosc/256	f _{CK1} /256

Note : When is setting (PF0,PF1,PF2,PF3) = (1,1,0,1) and (X,X,1,1), the frame frequency is same as frame frequency at the time of the (PF0,PF1,PF2,PF3) = (1,0,1,0) setting (fosc/896, f_{CK1}/896).

X: don't care

LC75879PT

(10) FC0 to FC2 ... Common/segment output waveform from frequency control data

These control data bits set the frame frequency of the common and segment output waveforms.

Control data			Common/segment output waveform frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 0, f _{CK1} =300[kHz] typ)	External clock operating mode (The control data OC is 1 and EXF is 1, f _{CK2} =38[kHz] typ)
1	1	0	fosc/6144	f _{CK1} /6144	f _{CK2} /768
1	1	1	fosc/4608	f _{CK1} /4608	f _{CK2} /576
0	0	0	fosc/3072	f _{CK1} /3072	f _{CK2} /384
0	0	1	fosc/2304	f _{CK1} /2304	f _{CK2} /288
0	1	0	fosc/1536	f _{CK1} /1536	f _{CK2} /192
0	1	1	fosc/1152	f _{CK1} /1152	f _{CK2} /144
1	0	0	fosc/768	f _{CK1} /768	f _{CK2} /96

Note: When is setting (FC0,FC1,FC2) = (1,0,1), the frame frequency is same as frame frequency at the time of the (FC0,FC1,FC2) = (0,0,0) setting (fosc/3072, f_{CK1}/3072, f_{CK2}/384).

(11) CT0 to CT2 ... Display contrast setting control data

These control data bits set display contrast.

CT0 to CT2: Sets the display contrast (7 steps)

CT0	CT1	CT2	LCD drive 3/3 bias voltage V _{DD0} level
0	0	0	1.00V _{DD} =V _{DD} -(0.05V _{DD} ×0)
1	0	0	0.95V _{DD} =V _{DD} -(0.05V _{DD} ×1)
0	1	0	0.90V _{DD} =V _{DD} -(0.05V _{DD} ×2)
1	1	0	0.85V _{DD} =V _{DD} -(0.05V _{DD} ×3)
0	0	1	0.80V _{DD} =V _{DD} -(0.05V _{DD} ×4)
1	0	1	0.75V _{DD} =V _{DD} -(0.05V _{DD} ×5)
0	1	1	0.70V _{DD} =V _{DD} -(0.05V _{DD} ×6)

Note: When is setting (CT0,CT1,CT2) = (1,1,1), the LCD drive 3/3 bias voltage V_{DD0} level is 1.00V_{DD}.

Note that although the display contrast can be adjusted by operating the built-in display contrast adjustment circuit, it can also be adjusted by modifying the supply pin V_{DD} voltage level.

LC75879PT

(12) W10 to W15, W20 to W25, W30 to W35 PWM data of the PWM output

These control data bits set the pulse width of the PWM output P1 to P4. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the $f_{CK2} = 38[\text{kHz}]$ typ (EXF = "1") in external clock operating mode (OC = "1") or when the serial data transfer is the simple mode transfer, these control data bits become invalid.

Wn0	Wn1	Wn2	Wn3	Wn4	Wn5	Pulse width of PWM output	Wn0	Wn1	Wn2	Wn3	Wn4	Wn5	Pulse width of PWM output

1	0	0	1	fosc/384	fCK1/384
0	1	0	1	fosc/256	fCK1/256

Note: When is setting (PF0,PF1,PF2,PF3) = (1,1,0,1) and (X,X,1,1), the frame frequency is same as frame frequency at the time of the (PF0,PF1,PF2,PF3) = (1,0,1,0) setting (fosc/896, fCK1/896). X: don't care

Clock output waveforms

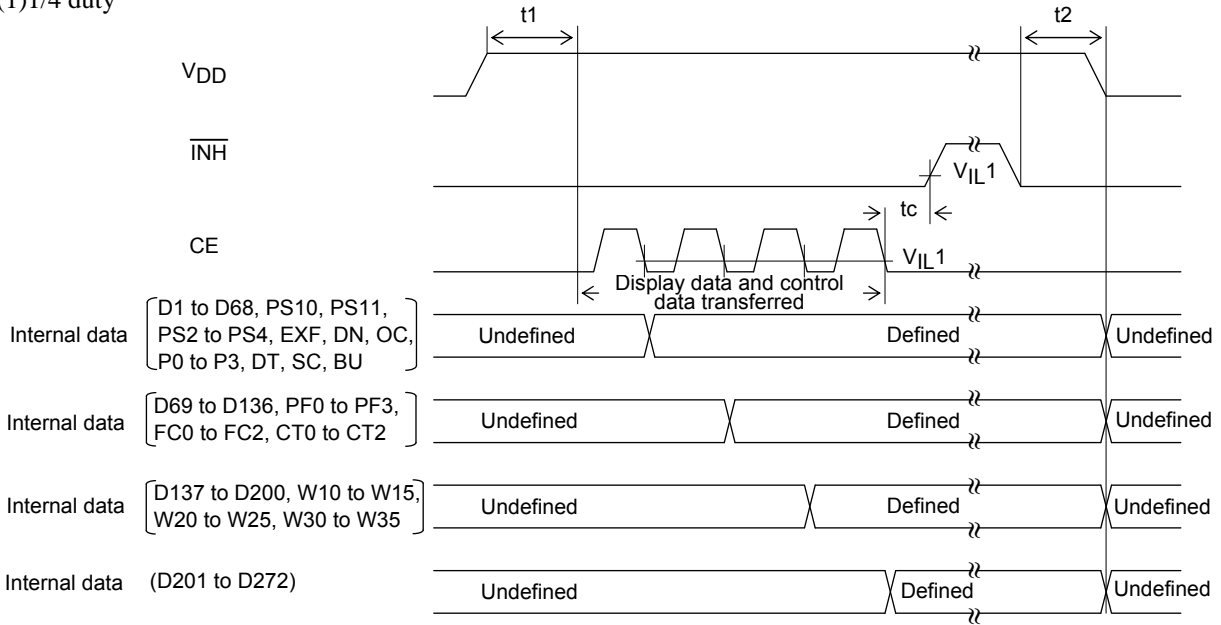

Control data		Clock frequency of clock output P1 $f_c (=1/T_c)$ [Hz]
PS10	PS11	
1	0	Clock output function (fosc/2, fCK/2)
0	1	Clock output function (fosc/8, fCK/8)

Display Control and the $\overline{\text{INH}}$ Pin

Since the LSI internal data (1/4 duty : the display data D1 to D272 and the control data, 1/3 duty : the display data D1 to D207 and the control data) is undefined when power is first applied, applications should set the $\overline{\text{INH}}$ pin low at the same time as power is applied to turn off the display (This sets the S1/P1 to S8/P8, S9 to S66, COM1 to COM3, COM4/S67, S68, and S69/OSCI pins to the VSS level.) and during this period send serial data from the controller. The controller should then set the $\overline{\text{INH}}$ pin high after the data transfer has completed. This procedure prevents meaningless display at power on (See Figure 5, Figure 6, Figure 7 and Figure 8.)

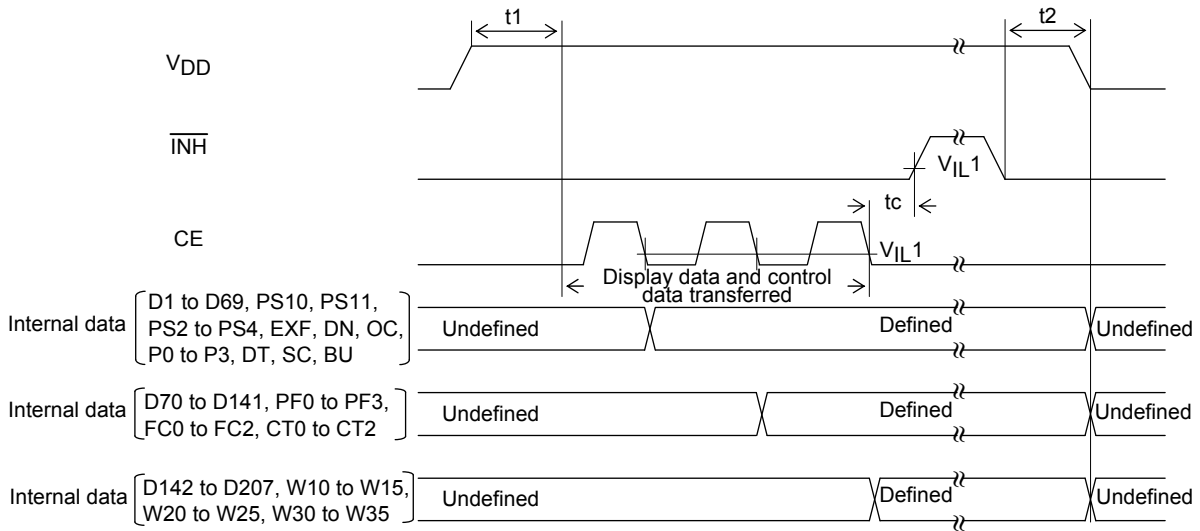

(1) 1/4 duty

Note: t1 > 1ms
t2 > 0
tc ... 10µs min

[Figure 5]

(2) 1/3 duty

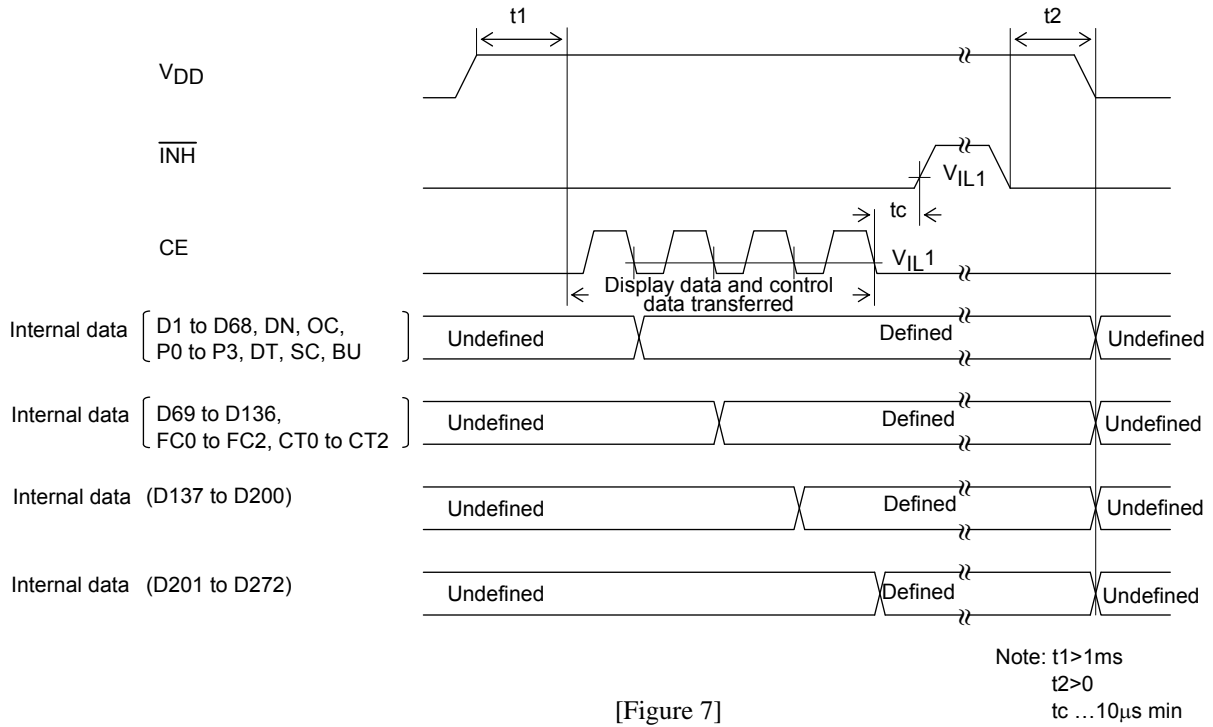

Note: t1 > 1ms
t2 > 0
tc ... 10µs min

(3) 1/4 duty (Simple mode transfer)

[Figure 7]

(4) 1/3 duty (Simple mode transfer)

[Figure 8]

Notes on Controller Transfer of Display Data

When using the LC75879PT in 1/4 duty, applications transfer the display data (D1 to D272) in four operations, and in 1/3 duty, they transfer the display data (D1 to D207) in three operations. In either case, applications should transfer all of the display data within 30 ms to maintain the quality of displayed image.

S69/OSCI Pin Peripheral Circuit

(1) Internal oscillator operating mode (control data OC=0)

Connect the S69/OSCI pin to the LCD panel when the internal oscillator operating mode is selected.

(2) External clock operating mode (control data OC=1)

When the external clock operating mode is selected, insert a current protection resistor R_g (2.2 to 22 k Ω) between the S69/OSCI pin and external clock output pin (external oscillator). Determine the value of the resistance according to the allowable current value at the external clock output pin. Also make sure that the waveform of the external clock is not heavily distorted.

Note: Allowable current value at external clock output pin > $\frac{V_{DD}}{R_g}$

(3) Unused pin treatment

When the S69/OSCI pin is not to be used, select the internal oscillator operating mode (setting control data OC to 0) to keep the pin open.

P1 to P4 pin peripheral circuit

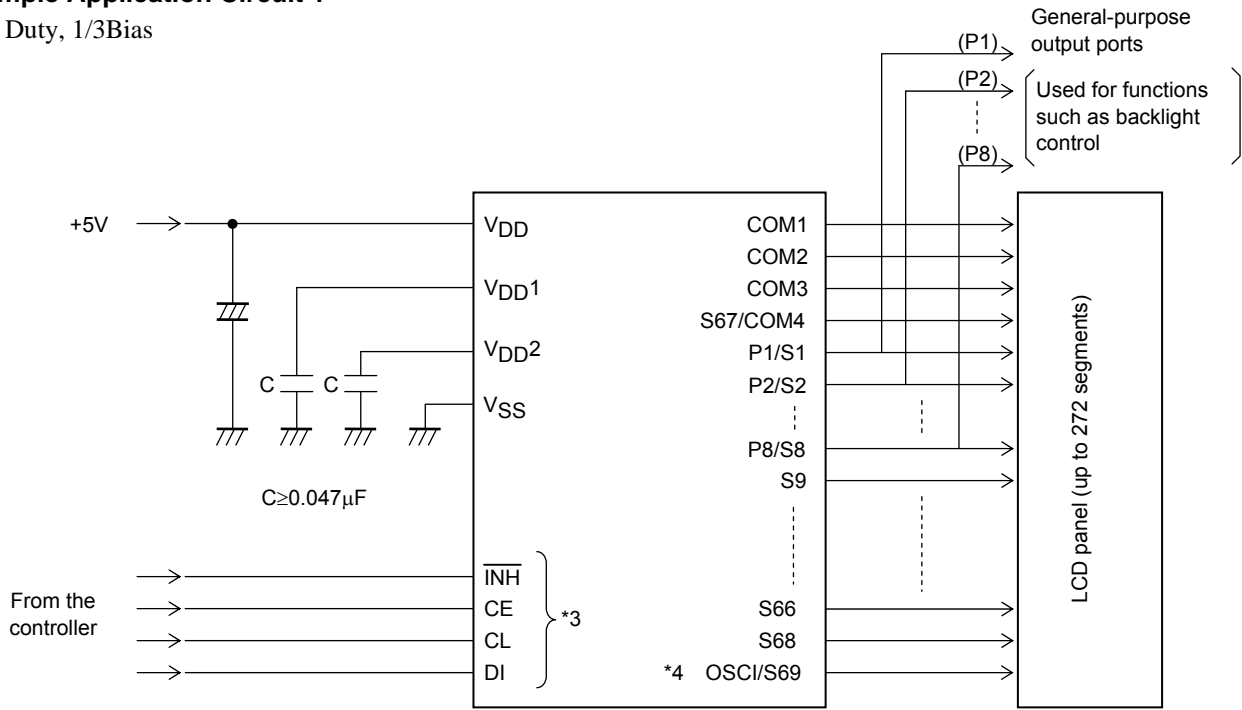

It is recommended the circuit shown below be used to adjust the brightness of the LED backlight using the PWM output P1 to P4

LC75879PT

Sample Application Circuit 1

1/4 Duty, 1/3Bias

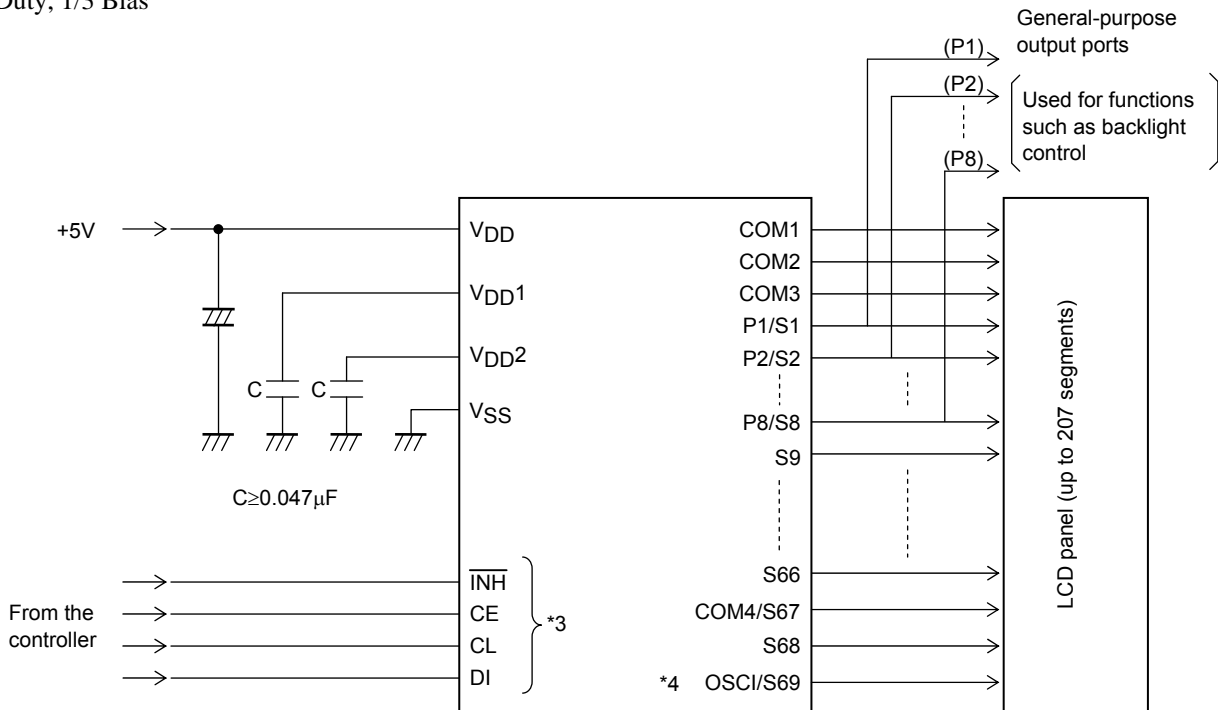

*3 The pins to be connected to the controller (CE, CL, DI, $\overline{\text{INH}}$) can handle 3.3 V or 5 V.

*4 Connect the S69/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor R_g (2.2 to 22 k Ω) between the S69/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode (see “S69/OSCI Pin Peripheral Circuit”).

Sample Application Circuit 2

1/3 Duty, 1/3 Bias

*3 The pins to be connected to the controller (CE, CL, DI, $\overline{\text{INH}}$) can handle 3.3 V or 5 V.

*4 Connect the S69/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor R_g (2.2 to 22 k Ω) between the S69/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode (see “S69/OSCI Pin Peripheral Circuit”).
