CMOS LSI

LCD Display Drivers

Overview

The LC75822E and LC75822W are general-purpose LCD display drivers that can be used for frequency display in microprocessor-controlled radio receivers and in other display applications.

Features

- 53 segment outputs (the maximum for static drive)
- Two drive types: static (1/1 duty (53 segments) and 1/2 duty (104 segments)
- Serial data input supports CCB* format communication with the system controller
- $\overline{\text{INH}}$ pin for turning off all display output
- The LC75822 is a CCB version of the LC75821 product.

- CCB is a trademark of SANYO ELECTRIC CO., LTD.
- CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.

Pin Assignment

Block Diagram

Pin Functions

Pin	Function
S1 to S32	Segment output pins
COM1, COM2	Common output pins (Only COM1 is used in static (1/1) drive. COM2 must be left open in that mode.)
VLcd	LCD bias voltage setting
OSC	Oscillator connection
CE, CL, DI	Serial data transfer inputs
Vss, VDD	Power supply
INH	Display off control Input INH = low (V _{SS})Display off (S1 to S32, COM1, COM2 = low) INH = high (V _{DD})Display on Note that serial data transfers are still allowed when display output is turned off using this pin.
OPEN	Make no connections to this pin.

Data Transfer Format

1. Static (1/1) duty

2. 1/2 duty (Only 64 bits need to be transferred if there are no more than 52 display segments. The transfer format is identical to the static duty case. It is not possible to change the D54 to D106 data without specifying the D1 to D53 data.)

CCB address: A2_H

DP: Drive type selection bit
 DP = 0: 1/1 duty
 DP = 1: 1/2 duty

D1 to D106: Display data
 D_n (for n = 1 to 106) = 0: Segment off
 D_n (for n = 1 to 106) = 1: Segment on

x: don't care

Data Transfer Examples

1. Static duty

2. 1/2 duty with 52 or fewer segments

3. 1/2 duty with more than 52 segments

Note: The following transfer format is not allowed in 1/2 duty with 52 or fewer segments.

2. 1/2 duty

Display Examples

1. Static drive (1/1 duty)

Example with 40 segments (Up to 50 segments can be driven.)

Note: Numbers in circles indicate the number of segments used.

2. 1/2 duty drive

Example with 80 segments (Up to 104 segments can be driven.)

Sample Application Circuit 1

Sample Application Circuit 2

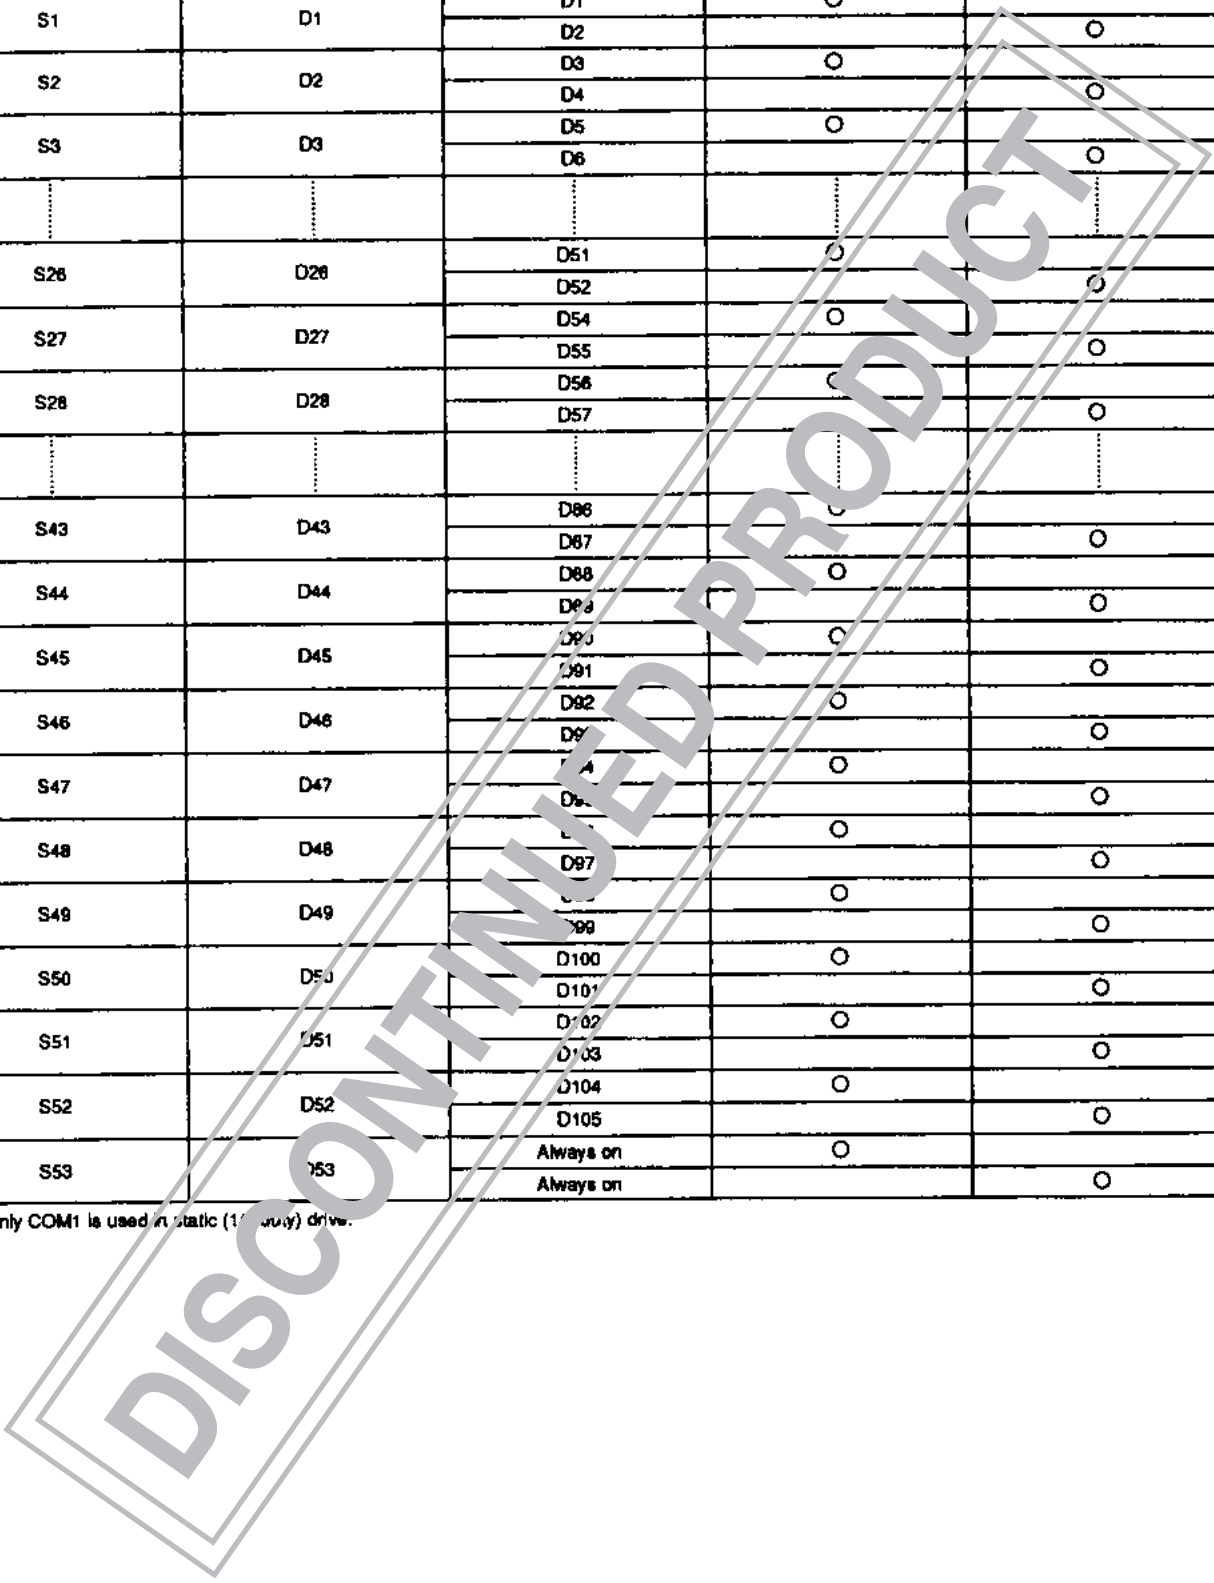

Note: The internal display data is undefined when power (V_{DD}) is first applied. Since a meaningless pattern will be displayed if the display is turned on in that state, the display should be turned off by setting INH low and turned on only after display data has been sent from the controller.

Oscillator Frequency

Refer to the figure below when determining the oscillator frequency.

Figure 1 LC75822E, 75822W Oscillator Frequency vs. OSC Pin RC Constant

Figure 2 LC75822E, 75822W Oscillator Frequency vs. V_{DD}

Recommended range for external resistance: 10 to 100 k Ω (Carbon resistance)

Recommended range for external capacitance: 330 to 3300 pF

330 to 820 pF: (Ceramic capacitance with a zero temperature coefficient)

1000 to 3300 pF: (Mylar capacitance with a positive temperature coefficient)
