

AM26LS31

Quad High Speed Differential Line Driver

The AM26LS31 is a quad-differential line driver, designed for digital data transmission over balanced lines. The AM26LS31 meets all the requirements of EIA standard RS-422 and federal standard 1020. It is designed to provide unipolar differential drive to twisted-pair or parallel-wire transmission lines.

The circuit provides an enable and disable function common to all four drivers. The AM26LS31 features 3-state outputs and logical OR-ed complementary enable inputs. The inputs are all LS compatible and are all one unit load.

Rochester Electronics Manufactured Components

Rochester branded components are manufactured using either die/wafers purchased from the original suppliers or Rochester wafers recreated from the original IP. All re-creations are done with the approval of the Original Component Manufacturer. (OCM)

Parts are tested using original factory test programs or Rochester developed test solutions to guarantee product meets or exceeds the OCM data sheet.

Quality Overview

- ISO-9001
- AS9120 certification
- Qualified Manufacturers List (QML) MIL-PRF-35835
 - Class Q Military
 - Class V Space Level
- Qualified Suppliers List of Distributors (QSLD)
 - Rochester is a critical supplier to DLA and meets all industry and DLA standards.

Rochester Electronics, LLC is committed to supplying products that satisfy customer expectations for quality and are equal to those originally supplied by industry manufacturers.

The original manufacturer's datasheet accompanying this document reflects the performance and specifications of the Rochester manufactured version of this device. Rochester Electronics guarantees the performance of its semiconductor products to the original OCM specifications. 'Typical' values are for reference purposes only. Certain minimum or maximum ratings may be based on product characterization, design, simulation, or sample testing.

Am26LS31

Quad High Speed Differential Line Driver

DISTINCTIVE CHARACTERISTICS

- Output skew – 2.0 ns typical
- Input to output delay – 12 ns
- Operation from single +5 V supply
- 16-pin hermetic and molded DIP package
- Outputs won't load line when $V_{CC} = 0$
- Four line drivers in one package for maximum package density
- Output short-circuit protection
- Complementary outputs
- Meets the requirements of EIA standard RS-422
- High output drive capability for 100 Ω terminated transmission lines
- Available in military and commercial temperature range
- Advanced low-power Schottky processing

GENERAL DESCRIPTION

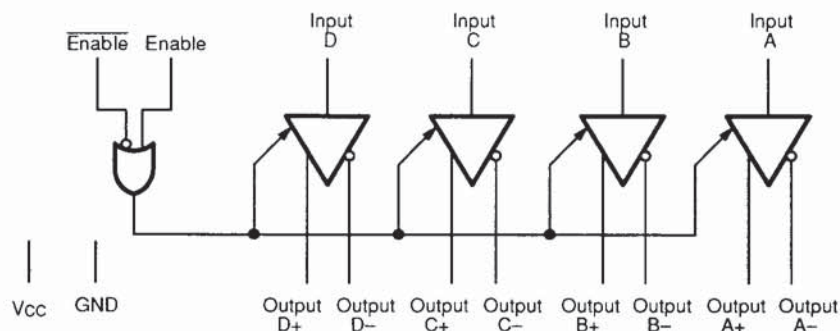

The Am26LS31 is a quad-differential line driver, designed for digital data transmission over balanced lines. The Am26LS31 meets all the requirements of EIA standard RS-422 and federal standard 1020. It is designed to provide unipolar differential drive to twisted-pair or parallel-wire transmission lines.

3-state outputs and logical OR-ed complementary enable inputs. The inputs are all LS compatible and are all one unit load.

The Am26LS31 is constructed using advanced low-power Schottky processing.

The circuit provides an enable and disable function common to all four drivers. The Am26LS31 features

ABSOLUTE MAXIMUM RATINGS

Storage Temperature	-65 to +150°C
Supply Voltage	-0.5 to 7.0 V
DC Input Voltage	-1.5 to 7.0 V
DC Output Voltage	-0.5 to V _{CC} max

Stresses above those listed under Absolute Maximum Ratings may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.

OPERATING RANGES

Commercial (C) Devices

Ambient Temperature (T _A)	0 to +70°C
Supply Voltage (V _{CC})	+4.75 to +5.25 V

Military (M) Devices

Temperature	-55 to +125°C
Supply Voltage (V _{CC})	+4.5 to +5.5 V

Operating ranges define those limits between which the functionality of the device is guaranteed.
