DC/DC (5V/3.3V) V23826-H18-C63/C363(*)

Single Mode 622 MBd ATM/SDH/SONET 1x9 Transceiver

Dimensions in (mm) inches

TRX without shield

FEATURES

- **Compliant with ATM, SONET OC-3, SDH STM-1 and SONET OC-12, SDH STM-4**
- **Meets mezzanine standard height of 9.8 mm**
- **Compact integrated transceiver unit with**
  - **MQW laser diode transmitter**
  - **InGaAs PIN photodiode receiver**
  - **Duplex SC receptacle**
- **Class 1 FDA and IEC laser safety compliant**
- **FDA Accession No. 9520890-12, 9520890-13**
- **Single power supply (5 V or 3.3 V)**
- **Signal detect indicator**
- **PECL differential inputs and outputs**
- **Process plug included**
- **Input Signal Monitor**
- **Wave solderable and washable with process plug inserted**
- **Industry standard multisource 1x9 footprint**
- **For distances of up to 15 km on single mode fiber**

Absolute Maximum Ratings

Exceeding any one of these values may destroy the device immediately.

Package Power Dissipation(1)	5 V	1.5 W
	3.3 V	0.9 W
Supply Voltage (V_{CC}–V_{EE})	5 V	7 V
	3.3 V	5 V
Data Input Levels		V_{CC}+0.5 V
Differential Data Input Voltage		2.5 V
Operating Ambient Temperature		0 °C to 70 °C
Storage Ambient Temperature		–40 °C to 85 °C
Soldering Conditions Temp/Time (MIL-STD 883C, Method 2003)		250 °C/ 5.5 s

Note

1. For V_{CC}–V_{EE} (min., max.). 50% duty cycle. The supply current does not include the load drive current of the receiver output.

*) Ordering Information

Input	Output	Signal detect	Voltage	Part number
DC	DC	PECL	5 V	V23826-H18-C63 (1)
			3.3 V	V23826-H18-C363 (1)
Shield options				**Add suffix to PIN**
Metallized cover, forward springs				-C3
Metallized cover, backward springs				-D3

Note

1. Standard version

DESCRIPTION

The Infineon single mode ATM transceiver complies with the ATM Forum's *Network Compatible ATM for Local Network Applications* document and ANSI's *Broadband ISDN—Customer Installation Interfaces, Physical Media Dependent Specification*, T1.646-1995, Bellcore - SONET OC-3 / IR-1 and OC-12 / IR-1, ITU-T G.957 STM-1 / S.1.1 and STM-4 / S.4.1. ATM was developed to facilitate solutions in multimedia applications and real time transmission. The data rate is scalable, and the ATM protocol is the basis of the broadband public networks being standardized in the International Telecommunications Union (ITU), the former International Telegraph and Telephone Consultative Committee (CCITT). ATM can also be used in local private applications.

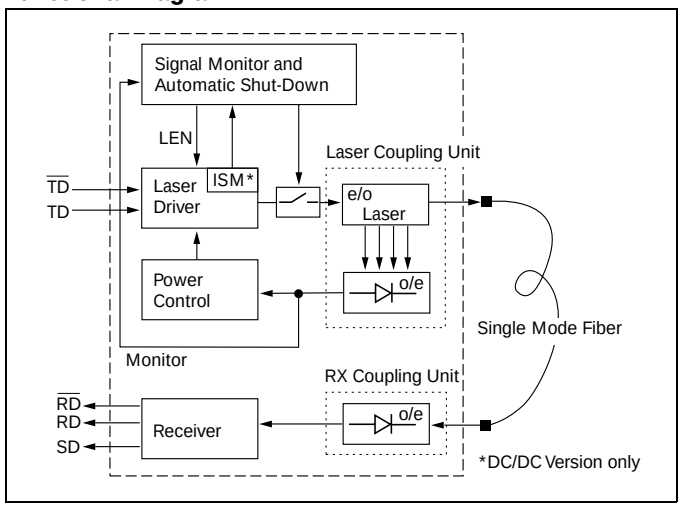

The Infineon single mode ATM transceiver is a single unit comprised of a transmitter, a receiver, and an SC receptacle. This design frees the customer from many alignment and PC board layout concerns. The module is designed for low cost WAN applications. It can be used as the network end device interface in workstations, servers, and storage devices, and in a broad range of network devices such as bridges, routers, and intelligent hubs, as well as wide area ATM switches.

This transceiver operates at 622.080 Mbit/s from a single power supply (+5 V or 3.3 V). The differential data inputs and outputs are PECL compatible.

Functional Description

This transceiver is designed to transmit serial data via single mode cable.

Functional Diagram

The receiver component converts the optical serial data into PECL compatible electrical data (RD and RDnot). The Signal Detect (SD, active high) shows whether optical data is present(1).

The transmitter converts electrical PECL compatible serial data (TD and TDnot) into optical serial data.
This version contains an Input Signal Monitor (ISM), that switches off the optical power if a continuously low level is applied at Data Input.

The transmitter contains a laser driver circuit that drives the modulation and bias current of the laser diode. The currents are controlled by a power control circuit to guarantee constant output power of the laser over temperature and aging.

The power control uses the output of the monitor PIN diode (mechanically built into the laser coupling unit) as a controlling signal, to prevent the laser power from exceeding the operating limits.

Single fault condition is ensured by means of an integrated automatic shutdown circuit that disables the laser when it detects transmitter failures. A reset is only possible by turning the power off, and then on again.

The transceiver contains a supervisory circuit to control the power supply. This circuit generates an internal reset signal whenever the supply voltage drops below the reset threshold. It keeps the reset signal active for at least 15 milliseconds after the voltage has risen above the reset threshold. During this time the laser is inactive.

Note

1. We recommend to switch off the transmitter supply (V_{CC}-Tx) if no transmitter input data is applied.

TECHNICAL DATA

The electro-optical characteristics described in the following tables are only valid for use under the recommended operating conditions.

Recommended Operating Conditions

Parameter		Symbol	Min.	Typ.	Max.	Units
Ambient Temperature		T_{AMB}	0		70	°C
Power Supply Voltage	3.3 V	V_{CC}–V_{EE}	3.1	3.3	3.5	V
	5 V		4.75	5	5.25	
Supply Current(1)	3.3 V	I_{CC}		160	230	mA
	5 V			180	270	
Transmitter						
Data Input High Voltage DC/DC		V_{IH}–V_{CC}	–1165		–880	mV
Data Input Low Voltage DC/DC		V_{IL}–V_{CC}	–1810		–1475	
Input Data Rise/Fall Time 10%–90%		t_R, t_F	100		1300	ps
Receiver						
Input Center Wavelength		λ_C	1270		1356	nm

Note

1. For V_{CC}–V_{EE} (min., max.) 50% duty cycle. The supply current does not include the load drive current of the receiver output.

Transmitter Electro-Optical Characteristics

Transmitter		Symbol	Min.	Typ.	Max.	Units
Launched Power (Average)(1)		P_O	–15	–11	–8	dBm
Center Wavelength		λ_C	1274		1356	nm
Spectral Width (RMS)		σ_I			2.5	
Relative Intensity Noise		RIN			–120	dB/Hz
Extinction Ratio (Dynamic)		ER	8.2			dB
Reset Threshold(2)	3.3 V	V_{TH}		2.7		V
	5 V			3.5		
Reset Time Out(2)		t_{RES}	15	22	35	ms
Eye Diagram(3)		ED				

Notes

1. Into single mode fiber, 9 µm diameter.
2. Laser power is shut down if power supply is below V_{TH} and switched on if power supply is above V_{TH} after t_{RES}.
3. Transmitter meets ANSI T1E1.2, SONET OC-3 and OC-12, and ITU-T G.957 mask patterns.

Receiver Electro-Optical Characteristics

Receiver	Symbol	Min.	Typ.	Max.	Units
Sensitivity (Average Power)(1)	P_{IN}		–30	–28	dBm
Saturation (Average Power)	P_{SAT}	–8			
Signal Detect Assert Level(2)	P_{SDA}	–37	31.4	–28	
Signal Detect Deassert Level(3)	P_{SDD}	–38	–34.5	–29	
Signal Detect Hysteresis	P_{SDA}–P_{SDD}		1.5		dB
Signal Detect Assert Time	t_{ASS}			100	µs
Signal Detect Deassert Time	t_{DAS}			350	
Output Low Voltage(4)	V_{OL}–V_{CC}	–1950		–1620	mV
Output High Voltage(4)	V_{OH}–V_{CC}	–1025		–720	
Output Data Rise/Fall Time, 20%–80%	t_R, t_F			375	ps
Return Loss of Receiver	A_{RL}	12			dB

Notes

1. Minimum average optical power at which the BER is less than $1x10^{-12}$ or lower. Measured with a 2^{23}–1 NRZ PRBS as recommended by ANSI T1E1.2, SONET OC-3 and OC-12, and ITU-T G.957.
2. An increase in optical power above the specified level will cause the SIGNAL DETECT output to switch from a Low state to a High state.
3. A decrease in optical power below the specified level will cause the SIGNAL DETECT to change from a High state to a Low state.
4. DC/DC for data, DC/DC PECL for Signal Detect. Load is 50 Ω into V_{CC} –2 V for data, 510 Ω (5 V) or 270 Ω (3.3 V) to V_{EE} for Signal Detect. Measured under DC conditions. For dynamic measurements a tolerance of 50 mV should be added. V_{CC}=3.3 V/5 V. T_{AMB}=25°C.

Pin Description

Pin Name		Level/Logic	Pin#	Description
RxV_{EE}	Rx Ground	Power Supply	1	Negative power supply, normally ground
RD	Rx Output Data	PECL Output	2	Receiver output data
RDn			3	Inverted receiver output data
SD	Rx Signal Detect	PECL	4	A high level on this output shows that optical data is applied to the optical input.
$Rx\text{-}V_{CC}$	Rx 3.3 V/5 V	Power Supply	5	Positive power supply, 3.3 V/5 V
TxV_{CC}	Tx 3.3 V/5 V		6	
TDn	Tx Input Data	PECL Input	7	Inverted transmitter input data
TD			8	Transmitter input data
TxV_{EE}	Tx Ground	Power Supply	9	Negative power supply, normally ground
	Stud Pin	Mech. Support	S1/2	Not connected

Regulatory Compliance

Feature	Standard	Comments
ESD: Electrostatic Discharge to the Electrical Pins	EIA/JESD22-A114-A (MIL-STD 883D Method 3015.7)	Class 1 (>1000 V)
Immunity: Electrostatic Discharge (ESD) to the Duplex SC Receptacle	EN 61000-4-2 IEC 61000-4-2	Discharges of ±15 kV with an air discharge probe on the receptacle cause no damage.
Immunity: Radio Frequency Electromagnetic Field	EN 61000-4-3 IEC 61000-4-3	With a field strength of 3 V/m rms, noise frequency ranges from 10 MHz to 2 GHz. No effect on transceiver performance between the specification limits.
Emission: Electromagnetic Interference EMI	FCC 47 CFR Part 15, Class B EN 55022 Class B CISPR 22	Noise frequency range: 30 MHz to 6 GHz; Margins depend on PCB layout and chassis design.

EYE SAFETY

This laser based single mode transceiver is a Class 1 product. It complies with IEC 60825-1 and FDA 21 CFR 1040.10 and 1040.11.

To meet laser safety requirements the transceiver shall be operated within the Absolute Maximum Ratings.

Caution

All adjustments have been made at the factory prior to shipment of the devices. No maintenance or alteration to the device is required.
Tampering with or modifying the performance of the device will result in voided product warranty.

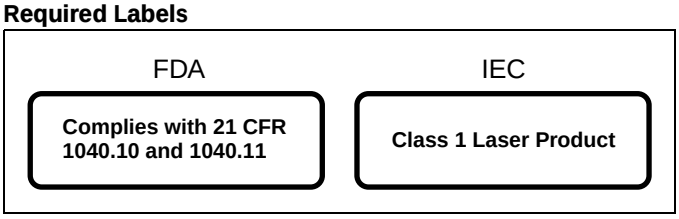

Note

Failure to adhere to the above restrictions could result in a modification that is considered an act of "manufacturing", and will require, under law, recertification of the modified product with the U.S. Food and Drug Administration (ref. 21 CFR 1040.10 (i)).

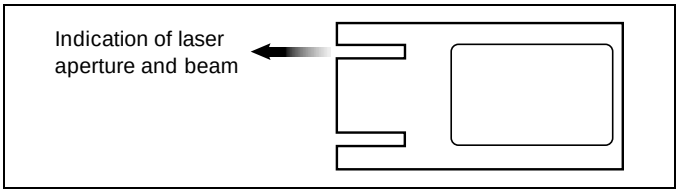

Laser Data

Wavelength	1300 nm
Total output power (as defined by IEC: 50 mm aperture at 10 cm distance)	less than 2 mW
Total output power (as defined by FDA: 7 mm aperture at 20 cm distance)	less than 180 µW
Beam divergence	4°

Required Labels

Laser Emission

APPLICATION NOTE

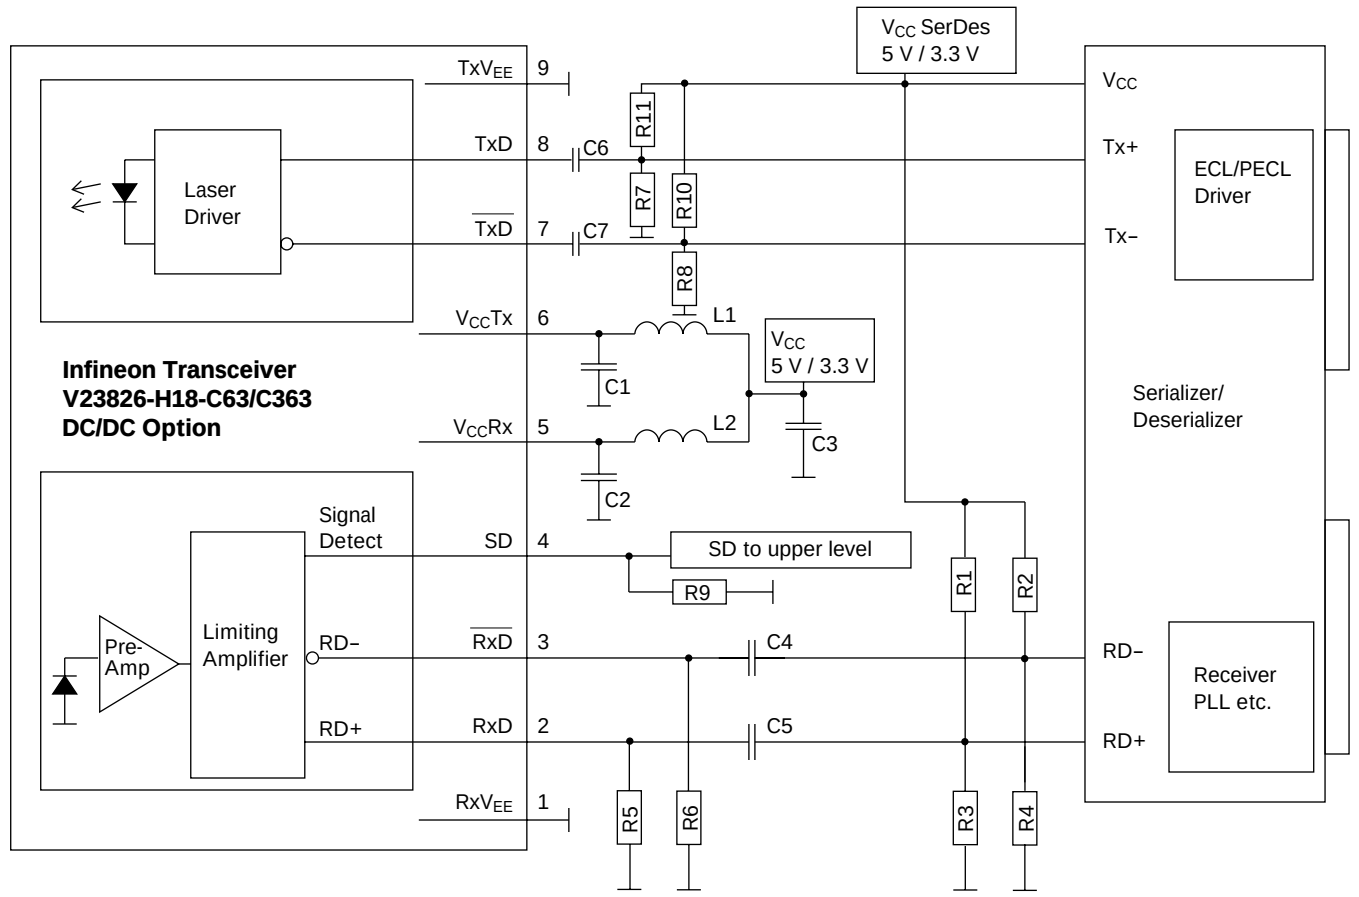

ATM transceivers and matching circuits are high frequency components and shall be terminated as recommended in the application notes for proper EMI performance. Electromagnetic emission may be caused by these components.

To prevent emissions it is recommended that cutouts for the fiber connectors be designed as small as possible.

It is recommended that the Tx plug and the Rx plug be separated with a bar that divides the duplex SC opening.

APPLICATION NOTE

Single Mode 622 MBd ATM 1x9 Transceiver

C1/2/3 = 4.7 µF
C4/5/6/7 = 100 nF
L1/2 = 1 µH
R10/11 = 82 Ω (5 V)
= 127Ω(3.3V)
(depends on SerDes chip used)
R7/8 = 127 Ω (5 V)
= 82Ω (3.3 V)
(depends on SerDes chip used)

R5/6 = 270 Ω (5 V)
= 150 Ω (3.3 V)
R9 = 510 Ω (5 V)
= 270 Ω (3.3 V)
Place R1/2/3/4 close to SerDes chip, depends on SerDes chip used, see application note of SerDes supplier.
Place R7/8/10/11 close to Infineon Transceiver

This Application Note assumes Fiber Optic Transceivers using 5 V power supply and SerDes Chips using 3.3 V power supply. It also assumes no self biasing at the receiver data inputs (RD+/ RD–) of the SerDes chip (Refer to the manufacturer data sheet for other applications).
3.3 V-Transceivers can be directly connected to SerDes-Chips using standard PECL Termination network.

Value of R1..R4 may vary as long as proper 50 Ω termination to V_{EE} or 100 Ω differential is provided. The power supply filtering is required for good EMI performance. Use short tracks from the inductor L1/L2 to the module $V_{CC}Rx/V_{CC}Tx$. Further Application Notes for electrical interfacing are available upon request. Ask for Appnote 82.

We strongly recommend a V_{EE} plane under the module for getting good EMI performance.

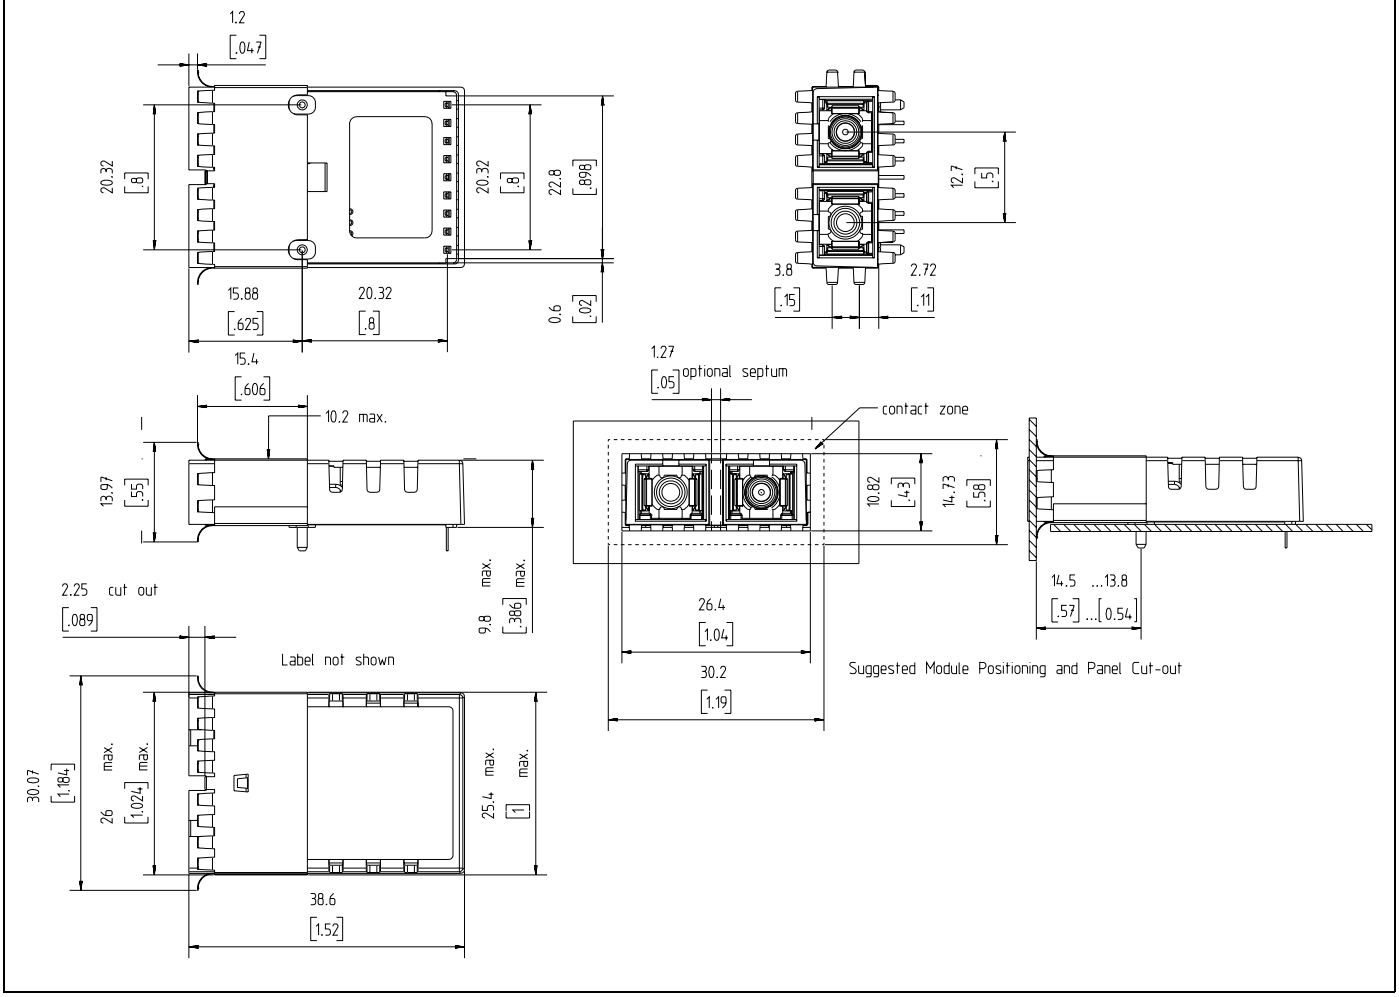

The transceiver contains an automatic shutdown circuit. Reset is only possible if the power is turned off, and then on again. ($V_{CC}Tx$ switched below V_{TH}).

Application Board available on request.

SHIELD OPTION

Shield with forward springs, -C3

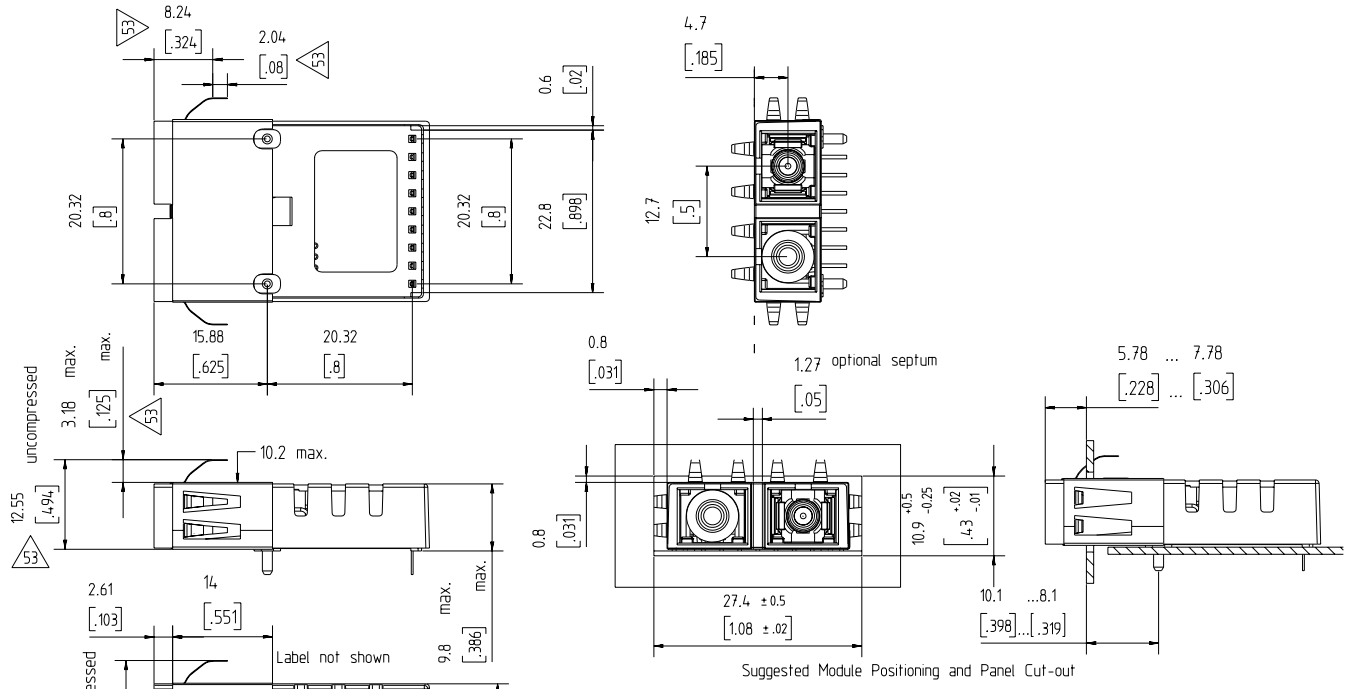

Dimensions in mm [inches]

SHIELD OPTION

Shield with backward springs, -D3

Dimensions in mm [inches]

-also applicable for: V23826-C18-Cxxx-D3
V23826-H18-Cxxx-D3
V23826-K15-Cxxx-D3
