100V, 2A Peak, High Frequency Half-Bridge Drivers

The ISL2100A, ISL2101A are 100V, high frequency, half-bridge N-channel power MOSFET driver ICs. They are based on the popular HIP2100, HIP2101 half-bridge drivers, but offer several performance improvements. The ISL2100A has additional input hysteresis for superior operation in noisy environments and the inputs of the ISL2101A, like those of the ISL2100A, can now safely swing to the V_{DD} supply rail. Finally, both parts are available in a very compact 9 Ld DFN package to minimize the required PCB footprint

NOTE: These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

NOTES:

1. The ISL2100A-ISL2101A are capable of derated operation at supply voltages exceeding 14V. Figure 22 shows the high-side voltage derating curve for this mode of operation.
2. All voltages referenced to V_{SS} unless otherwise specified.
3. θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with “direct attach” features.
4. For θ_{JC}, the “case temp” is measured at the center of the exposed metal pad on the package underside. See Tech Brief TB379 for details.
