Description

The Harris CD74HC03 and CD74HCT03 logic gates utilize silicon gate CMOS technology to achieve operating speeds similar to LSTTL gates with the low power consumption of standard CMOS integrated circuits. All devices have the ability to drive 10 LSTTL loads. The 74HCT logic family is functionally as well as pin compatible with the standard 74LS logic family.

These open drain NAND gates can drive into resistive loads to output voltages as high as 10V. Minimum values of R_L required verses load voltage are shown in Figure 2.
