PINOUT A

96106 QUAD 2-INPUT NOR RECEIVER

DESCRIPTION — The 96106 inputs are designed to provide higher noise immunity than standard TTL inputs and also present less loading to the signal source. Also, in the power down condition, input leakage is 80 μ A or less, making the 96106 well suited for data bus applications. Output signal levels are standard TTL.

ORDERING CODE: See Section 9
