Noise margin at the High level	V_{nH}	1	-	-	V

C_b ; total capacitance of one bus line in pF.

NOTE). Data hold time : $t_{HD:DAT}$

Please hold the Data Hold Time ($t_{HD:DAT}$) to 300ns or more to avoid status of unstable at SCL falling edge.

The SDA block in the NJW1151 does not hold data. Add external data-delay-circuit of the SDA terminal, in case of not providing a hold time of at least 300nsec for the SDA in the master device.

The time-consists of the data-delay-circuit of the SDA terminal are as follows.

- (a) Low level → High level: $T_{LH} \approx R_P * C_D$
- (b) High level → Low level: $T_{HL} \approx R_D * C_D$

In addition, Schottky barrier diode (SBD) influences a Low level at the Acknowledge. Therefore choose the low forward voltage (V_f) as much as possible.

APPLICATION CIRCUIT

■ Definition of cut-off frequency for Tone Control

Cut-off frequency for Tone Control is adjustable with changing the capacitor C1, C2 in below circuit. See the next function for the cut-off frequency.

EX) C1 = 10nF, C2 = 680nF
 Cut-off frequency for Treble = 3.9kHz
 Cut-off frequency for Bass = 238Hz

1) TREBLE = +/-10dB

2) BASS = +/-10dB

$$f_c = \frac{39.2 * 10^{-6}}{C1} (kHz)$$

$$f_c = \frac{161.7 * 10^{-6}}{C2} (Hz)$$
